Amendments to the Abstract:

~~In these years, in a~~ A foldable portable telephone, ~~such~~ which has ~~a~~ technology for displaying information, such as ~~a~~the remaining ~~amount~~ capacity of a battery, the number of received emails and so on, on an LCD (sub liquid crystal) which is located on the back surface has been developed, but, for example, in order to take a look at ~~a~~the content of ~~a~~the received mail, there is a necessity to ~~carry out an operation such as taking~~take the trouble to open the housing of the portable telephone~~, and a study regarding usability has not bee carried out sufficiently~~.

~~———~~In order to solve ~~the above-described~~ this problem, ~~provided is~~ a portable terminal ~~in which~~ has a first housing and a second housing, each of which has a front surface and a back surface which is disposed so as to be opposed to the front surface, are foldable through a hinge part~~, and are foldable~~ in such a manner that the front surface of the first housing and the front surface of the second housing face ~~to~~ each other. The portable terminal~~, and it~~ further has a display part which is located on the back surface of the first or the second housing, and a control part which ~~controls~~ operates to switch a screen display of the display part in case ~~that~~ a predetermined signal ~~was~~ has been received.
